

iPipeline Global Sub Processor Lists by Location

iPipeline Inc uses sub processors in the general running of its business and to assist it in providing its services to its customers. A sub processor is a third-party service provider or data processor engaged by iPipeline, who has or potentially will have access to or process personal data (PII & PHI).

iPipeline currently uses the below list of sub processors to provide infrastructure services, customer support and business & service administration services. Please note that not all sub processors are used in the provision of all products and services we provide, and some may only be involved in assisting with the provision of specific services.

As our business and services evolve, we may add, remove, or update information about our sub processors on this webpage or retain the services of additional sub processors, if we determine their processing activity will improve or enhance our ability to deliver our services to you. We will periodically update this page to reflect changes to our sub processors. If you have any questions about our sub-processing activities, please contact dpo@ipipeline.com
